Qualys Releases Global IT Asset Inventory (AI) Cloud App

February 11, 2019

Delivers unprecedented visibility and a source of truth for Security and IT teams

FOSTER CITY, Calif., Feb. 11, 2019 /PRNewswire/ -- Qualys, Inc. (NASDAQ: QLYS), a pioneer and leading provider of cloud-based security and compliance solutions, today announced general availability of its groundbreaking global IT Asset Inventory (AI) Cloud App, which provides Security and IT teams a single source of truth to analyze their complex and interconnected global IT environments, and collaborate on critical security remediation efforts.

Global IT Asset Inventory delivers unprecedented visibility and a single source of truth for Security and IT Teams.

Digital Transformation creates complex IT infrastructure that challenges organizations to accurately assess their networks and quickly remediate risk. Using a combination of Qualys sensors —Cloud Agents, scanners and passive network sensors— Qualys AI collects and analyzes data about assets across hybrid environments, and delivers up-to-date, comprehensive and continuous information about those assets and their security and compliance posture. Such capabilities allow Security and IT teams to quickly identify critical or potential risks, such as end-of-life software, and work together to remediate them.

For example, a Fortune 50 retailer now gains full visibility into their global corporate data centers, multi-cloud environment as well as stores and warehouses, providing them new insights into their complex global environment, and revealing hidden risk from unknown devices or end-of-life technology.

"Qualys Asset Inventory delivered immediate value by providing insights and exponentially accelerating time-to-decision," said Sunil Saale, Head of Cyber and Information Security, MinterEllison. "It gives us the ability to see every asset on our network, and gives us high-fidelity, granular IT asset data that can be used across IT and security initiatives, such as monitoring for any unapproved software and tracking end-of-life hardware and software that impact our technology roadmaps."

"You simply cannot secure what you do not know, and our new groundbreaking global IT Asset Inventory cloud app provides a single source of truth across on-premises infrastructure, endpoints, and clouds," said Philippe Courtot, chairman and CEO, Qualys, Inc. "Since it is fully integrated with the Qualys Cloud Platform, you will know instantly what assets connect to your network, and be able to assess their security and compliance posture in real-time, giving you unprecedented and essential visibility."

Continuous Risk Assessment and Compliance Management
With increasing risks, regulations on security and privacy, and software licensing audits, the role of IT asset management is neither optional nor the concern of IT teams alone. Industry regulations and standards such as PCI DSS, HIPAA, GDPR and FedRAMP require organizations to continuously identify, track and secure assets storing sensitive data.

Qualys AI frees security and compliance teams from dependence on legacy inventory tools and helps these teams manage the risk profile of their assets in real-time by:

- helping ensure no unauthorized assets are spun-up in production.
- detecting when applications outside their whitelist are running.
- alerting teams when vulnerable, end-of-life or unlicensed software is present.

A Single Source of Truth to Eliminate Blind Spots

Qualys AI continuously gathers asset telemetry to identify and categorize devices, hardware, and software. Both IT and Security teams can then drill down into the resulting asset details and risk information to make informed business decisions.

Qualys AI also eliminates the need to manually integrate disparate systems or dispute the validity of data sets, allowing teams to share a common source of truth, leading to better IT and security outcomes. Customers can update their CMDB with detailed asset data to enable initiatives such as:

- IT cost reduction
- enterprise architecture
- cloud and data center migrations
- service management

The certified Qualys CMDB Sync App for ServiceNow supports 2-way synchronization of asset information.

Pricing and Availability
Qualys AI is generally available today starting at $15 per asset per year.
