## Qualys Unveils Midmarket Private Cloud Platform Appliance (PCPA)

### Groundbreaking New Form-Factor Extends Private Cloud Security and Compliance to Medium-Sized Companies Needing to Retain Data On-Premise or Within Local Geographies

REDWOOD CITY, CA -- (Marketwired) -- 06/13/16 -- [Qualys, Inc.](#) (NASDAQ: QLYS), a pioneer and leading provider of cloud-based security and compliance solutions, today unveiled Qualys Private Cloud Platform Appliance (PCPA), a new managed on-premise security and compliance solution packaged in a groundbreaking form-factor for medium-sized companies. This newest member of the [Qualys Private Cloud Platform \(PCP\)](#) family offers the same robust private cloud security and compliance services with scanning capacity in a new high-performance, purpose-built 1U appliance.

Often organizations are required to maintain customer data within specific geographic locations.

Qualys PCPA is designed to help mid-sized organizations keep security and compliance information locally, within their data centers or a partner's, without sacrificing the value of managed cloud services.

Qualys PCPA offers the full benefits of the Qualys Cloud Platform suite as a managed, monitored service, securely maintained by Qualys within an organization's datacenter. It supports both scanners and cloud agents, and includes a comprehensive, integrated suite of Qualys apps for automating asset discovery, security assessments and compliance management, including: AssetView, Vulnerability Management, Continuous Monitoring, ThreatPROTECT, Web Application Scanning, Web Application Firewall, Policy Compliance and Security Assessment Questionnaire.

Qualys PCPA features:

- | A compact, cost-effective private cloud solution built to meet the needs of midmarket businesses
- | Smaller version of the Qualys PCP family of products with the same security, performance and compliance capabilities
- | A turnkey, easy-to-install appliance that meets regulatory data location requirements and internal policies
- | End-to-end, in-transit and in-storage data encryption
- | A purpose-built hardware appliance form factor, fully managed by Qualys

"The new PCPA allows us to extend our security and compliance solutions to more effectively compete in environments where our current private cloud offering is too expensive for mid-sized companies," said Philippe Courtot, chairman and CEO of Qualys.

The current version of PCPA allows customers to scan up to 30,000 IPs for vulnerability management and up to 30,000 IPs for policy compliance within a 24 hour period. In addition, PCPA can regularly scan up to 3,000 web applications, depending on their size and complexity.

#### **Pricing and Availability**

Qualys PCPA will be available starting July 1. It is currently being sold as an annual subscription starting at \$75,000, which includes a bundle of 2,500 vulnerability management and 2,500 policy compliance licenses.
