Qualys to Demonstrate Certified ServiceNow Synchronization App at Knowledge16

Application Seamlessly Synchronizes Qualys IT Asset Discovery and Classification With the ServiceNow Configuration Management Database

LAS VEGAS, NV -- (Marketwired) -- 05/18/16 -- [Qualys, Inc.](#) (NASDAQ: QLYS), a pioneer and leading provider of cloud-based security and compliance solutions, today announced its participation in the ServiceNow® user conference, [Knowledge16](#). Qualys will demonstrate its newly certified Synchronization App for ServiceNow Configuration Management Database (CMDB), which integrates Qualys' robust asset discovery and classification capabilities with ServiceNow's platform.

"Until now, gathering up-to-date information on our known and unknown global IT assets has been a real challenge. The unique discovery and classification capabilities of Qualys, combined with the integration and synchronization with our ServiceNow CMDB, give us real-time continuous visibility," according to a joint Qualys and ServiceNow customer leading the global information services industry.

The fully configurable Synchronization App, now available in the [ServiceNow Store](#), can automatically update the ServiceNow CMDB with up-to-date security and compliance information gathered by [Qualys Cloud Agents](#) on IT assets, giving ServiceNow users better visibility of their global IT assets on a continuous basis. Leveraging Qualys' Cloud Agent technology, the App relays real-time inventory information about IT assets to the [Qualys Cloud Platform](#), which is then synchronized with ServiceNow. Additionally, the App provides a differential report on IT assets that are registered in the ServiceNow CMDB but not in Qualys, and vice-versa, enabling IT and security administrators to take action on those specific assets.

What: Qualys at Knowledge16

When: May 15-20, 2016

Where: Mandalay Bay, 3950 Las Vegas Blvd S., Las Vegas, NV 89119 (booth 1225)

In addition to the Qualys App for ServiceNow CMDB, Qualys will also be demonstrating the latest additions to the Qualys Cloud Platform, [ThreatPROTECT](#) and [AssetView](#). ThreatPROTECT allows users to correlate active threat data with vulnerability scans, presenting findings in a single dynamic dashboard. The threat level dashboard can then be combined with the asset inventory generated by AssetView, allowing users to add another layer of context to their analysis, including data on asset location, ownership and associated security risk.
